

## ***Defy convention with Clyde...***

Integration is at the heart of Design LED Products' lighting solutions, offering light that adapts perfectly in sophisticated applications for lighting designers and architects. Inspired as much by traditional craftsmanship as by state-of-the-art engineering, Design LED Products offer unlimited design options and creative lighting concepts that defy convention.

Clyde's integrated optical system provides controlled illumination, directing light output where it's needed and ensuring perfectly illumination with minimal glare.

Its unique ability to conform to a wide range of shapes makes it an ideal solution for any designer looking to overcome many of the constraints and challenges imposed by existing LED systems. At just 2 mm thin, Clyde offer a radically different LED system making it virtually invisible. The slim direct lighting solution create new design opportunities and maximises space.

### KEY FEATURES

- Total design freedom
- Integration of light
- Space optimisation
- No shadowing or glare

### **About Design LED Products**

Design LED Products, head-quartered in Livingston, Scotland, is an internationally regarded LED lighting system business focussing on flexible and extremely thin LED lighting solutions for direct illumination and area lighting. Design LED Products offer complete application oriented lighting solutions by combining the unique product advantages with high efficient drivers and state-of-the-art smart controls. The vision of the company is to see light uniquely integrated into people's lives and to completely transform how they illuminate, experience and impact their environment.
